

VACCINATIONS

Your puppy will have had 2 Vanguard Plus 5 shots (Covers 5 different diseases) and been wormed at 4 and 7 weeks and 11 weeks. When you take your puppy to your vet for its initial health check, you will want to discuss with him when he recommends the next shot or vaccination. Puppies are born with some immunity from the Dam that last for a short period of time, but this immunity wears off at different ages for different puppies, so it is important to continue the vaccinations, according to your vet's recommendations.
